Project Title: No Login Message Board

I. Introduction

The No Login Message Board is a web application which enables users to create their own message board, share a link with other users and write message in a collaborative way.

II. Features

1. **Users can create boards (without registration or login)**
   Any (anonymous) user can create a new message board by simply clicking a button. No registration or login is required.
2. **Boards can be shared by their unique link**
   Every message board has a unique ID. Users can access a message board if they know the ID of the board. This means that boards can be shared by links.
3. **Users can write messages to the board**
   Any user can write a message to the board. The message will appear on the board where every other user can read, edit, delete or vote on it.
4. **Every user can edit, delete or vote on every message**
   Every user can edit, delete or vote on every message. This means that the board is completely collaborative. It is not protected in any way.
5. **Messages can be searched and ordered**
   Messages can be search and ordered on a board. So users can find a particular message.

III. Market Survey

1. **https://jsfiddle.net**
   JSFiddle.net provides JavaScript sandboxes which can be shared by a link. Every user can create a sandbox, post code and send a link to the sandbox.
   Difference: The sandbox cannot be edited by the user who receives the link
   Similarity: Anonymous creation of a "space" with a unique link
2. **https://ziteboard.com**
   ZiteBoard.com provides a collaborative white board.
   Users can create new boards and invite other users to draw on the board.
   Difference: Users must be logged in
   Similarity: Users can edit the same content collaborative
